

Style360 Entity-Relationship (ER) Diagram

While the current implementation of Style360 processes images statelessly via the PHP backend to Modal.com (without saving user accounts to a persistent SQL database), this conceptual ER diagram illustrates how the core data entities relate to each other logically. This structure would form the basis of a future database schema if features like user accounts, saved avatars, or a "wardrobe history" were added.

Style360 - AI Virtual Try-On System Architecture

End-to-End Data Flow: Frontend Layer → Local PHP Proxy → Modal.com A100 Cloud GPU Pipeline
